Versão
07/2013
WELCOME TO THE SOL TEAM!
Thank you for selecting a SOL harness. You have just acquired a high quality product, manufactured under one of the most demanding industry standards worldwide.

We trust your CALLIPLOX REVERSÍVEL will bring you many great life memories you will cherish forever.

We would like you to read this manual carefully and thoroughly. In it, you will find important information about using your new equipment.

In the event you should have any questions about its usage or should you wish to be updated on the latest news at SOL, we remain at your disposal:

Phone: 0055 47 3275 7753
Mail: export@solsports.com.br or info@solsports.com.br.

Don’t forget to access our website often at http://www.solsparagliders.com.br.

to keep current on the latest models’ launchings, results and news from the world of paragliding.

Welcome to the SOL Team!

ATTENTION
Please read this manual carefully and note the following details:

• This harness meets at the time of delivery the requirements of the LTF certification or of the EN!
• Any equipment alteration will result in the cancellation of this respective certification.
• Flying with this equipment shall be performed at the individual's own risk.
• The manufacturer and its representatives are not liable and therefore not responsible for any misusage nor mishandling of this equipment.
• Every pilot is responsible for the maintenance and assessment of equipment usability.
• It is a basic assumption that the pilot is certified to fly this paraglider.
• This manual offers information about your paraglider. It is not a training manual.
• It is a assumption that the pilot respects the law and order of aviation and that his skills are up to the challenge of this particular equipment!
About **SOL**

Founded in 1991, after six months of research and many visits to several manufacturing facilities and suppliers, **SOL** began its production in partnership with the European brands Condor, Comet and Nova, and became autonomous in 1999 with its own testing and development centers.

From the beginning **SOL** has adopted the philosophy of utilizing certified designs, manufactured with imported materials of the highest quality by specialized and skilled-trained staff.

In 1995, the company moved to its current facility, occupying an area of 3,400 m² and has at its disposal a team of about 140 employees, of which many are pilots. **SOL** provides a comprehensive benefits package such as Health Plan, Life Insurance, partnerships with pharmacies, transportation vouchers, incentive getaways to employees who outperform each month, and education grants.

At **SOL**, we take extreme measures to maintain our machinery and manufacturing equipment current with the world market. This way, we safeguard our accuracy everyday in the production process, control and assuring the high quality of **SOL** brand and products throughout more than 70 countries around the world.

**SOL** is one of the few paragliding enterprises worldwide to have its own manufacturing facilities able to test every new model before making it available to the market, which fosters the reliability necessary for excellent performance when flying.

In early 2004 **SOL** became certified by DHV, which is the most respected regulating body of free-flying worldwide. Its mandate is to make sure its members have the capacity to reproduce faithfully the certified equipment on an industrial scale. Few facilities in the world possess this certification in their manufacturing process. **SOL** was one of the firsts to obtain it!

This is just one of the great accomplishments of this young and dynamic company, which presently is among the ten major paragliding and accessories manufacturers in the world!
Philosophy

SOL’s philosophy is to introduce products that are considerably better than current ones, in order to guarantee significant advancements in four aspects: Safety, Performance, Ease of Operation and Innovation.

Safety: The new product has to offer a level of safety that is at par or better than the one it is replacing.

Performance: The new product must perform better than the one it is replacing.

Ease of Operation: The new product must display higher levels and better operational ease than the one it is replacing.

Innovation: New products must display real benefits to the user, facilitating free-flying, increased safety, or both.

The development process and design of every new product begins at the computer. Drawing Software, 2D, 3D modeling and simulation are utilized before the actual manufacturing of prototypes, in order to ensure greater accuracy in each new design.

Introduction

SOL is producing a complete line of modern paragliders: from teaching to competition and acro all pilots will find their paragliders. Since we are often in the air - testing our gliders, for fun or breaking world or national records - it was only logic to develop our own harness to assure the evolution in safety, performance, ease of operation and innovation.

As in any other product of SOL, we are using always the best and most carefully chosen materials, they are granting a long life and a high security standard. All SOL paragliders are manufactured in our own industrial park.

The harness Calliplox Reversível is a version of the well-known harness Mountain Light Calliplox. But it is more comfortable and can be used as a backpack. Light and small it can be used by all pilots. The harness has an integrated back-protector Airbag Cygnus. The back-pack is comfortable and has solutions for long walks. The integrates system for the reserve corresponds the European norm LTF/EN DHV GS-03-0375-10 in all aspects (120 kg). In this manual you will find all important information about using your new equipment Calliplox Reversível.
Technical innovations

- Lateral fitting with trimmer and safety strap
- ABS system
- Quick hook leg locking
- Water compartment hose gap
- Anatomic shoulders’ cut
- Anatomic back-rest comprised of foam
- Spacious side pocket
- Shoulder strap attached to seat
- Lateral reinforcement for better load distribution
- Elastic setter for accelerator and foot support
- Sliding reserve parachute container
- Foot support
- Spacious baggage pocket
- Personal identification compartment
- Reserve independent bridle system, as per LTF/EN regulation
- Straps’ handle as per LTF/EN regulation
- Adjustable quick “hook T Cobra of 38-55 cm
- Extended accelerator pulley
- Waist fitting
- Back-pack with:
  - Pocket for waterbottle
  - Personal identification compartment
  - Regulation for chest-strap
  - Hand support
  - Shoulder strap regulation and cushioned
  - Cushioned waist strap
  - Height-regulation for shoulder strap
  - Cushioned back
  - Volume: 130 L
  - Anatomic Back-Rest
  - Pocket in Waisstrap
Adjustments and installations

The SOL-Harness provide a variety of adjustment possibilities, so that the pilot is able to find his/her ideal flying position. The first adjustment must be done in a simulator where you can be hanging in order to make the adjustments. It may be necessary to take a few testing flights until the ideal setting is achieved, but the pilot will be rewarded with amazing comfortable flights.

For your first flight, choose calm weather conditions. Should you need to make further adjustments, it will be easier to find the ideal position after this first flight.

**Attention**
- Please install the carabines, the accelerator and the reserve before you make the adjustments of the SOL-Harness.
- Never carry instruments that may perforate the harness backing in case of impact!

*Carabiners’ installation*

**Attention**
Carabiners: Pay attention at each installed carabin of the permission and/or other references of the producer. You have to look out regularly for thin fissures and/or malfunction. The carabine has to close always 100%.
If you choose to change the carabines (even made of steel) at least each 5 years or after 250 flight hours you are making a wise decision.
**Carabiners opening**
The chest strap is responsible for the carabiners opening, depending of the paragliders size. Depending on the paraglider size, there is a measurement of the carabiners opening to which the paraglider was designed and tested. With SOL paragliders you must fly within these measurements. In case you are outside these measurements, the paraglider's behavior can not correspond to the certification: We have included a tape with your harness to help you set the exact measurement of distance between the carabiners: S - 40cm / M - 42cm / L - 44cm / XL - 46cm
The measurement has to be made at the points indicated in the graphic:

![Diagram of carabiner measurement](image)

For better orientation we marked the chest strap. If you see the mark in the center of the hook the carabiners opening is 42 cm.

**Attention**
You have to obey the opening in the paragliders owner manual to maintain the certification.

**Water compartment**
Your harness Callipox Reversivel has at its disposal a water compartment located in an aero dynamically efficient place in the rear pocket with easy access. Through an aperture you can pull the tube.
**Baggage pocket**
Your equipment should be stored in the baggage pocket to avoid malfunction of the Airbag.

**Installation of the Accelerator**
All necessary buckles to adjust the speed system are found on the harness' body. Follow the instruction in the image.

**Installation of the Accelerator Hook**
Follow the instruction in the illustration.

**Attention**
Adjust the accelerator in the simulator to avoid surprises during flight.
**Reserve parachute installation**

Visualize the details of how to execute the reserve parachute installation. The purpose of this illustration is to help you understand the process. If necessary, you should ask for professional help to make sure it is properly installed.

**Attention**

⚠️ Image 4 and 9: Pull the bridles firmly to stop an involuntary opening, this avoids a dangerous friction in the event of a reserve opening.
Attention

The SOL-Harness features a reserve parachute installation system with easy access at the moment of grab and throw, by possessing an activator which has a shorter connection. Some layers of fabric covers the entrance recipients destined to the reserve (Figure 19), protecting the parachute from dust and humidity. In case the pilot lands on water and gets the reserve wet, the reserve should be removed from the harness, be dried and re-packed before it is placed back into the recipient (see the reserve manual).

Attention

- Before every flight, inspect the activation handle and its pins, to make sure they are at the correct setting position.
- After the installation you should make a test.
- The container's size takes to account the reserve size which would be normal for the pilot's weight x harness size. There might be the case when large reserves may not fit adequately in the smaller size harness.
- Never throw the reserve in flight-direction.

Pay special attention to the fact in which direction you must pull your reserve in order to throw it out.
**Reserve compartment**

The reserve parachute compartment on your harness was designed for most of the parachutes in the market. In any case, you must install, simulate and perform all testing, so that you will not have any surprises in case you need to activate it. Any questions concerning its operation must be dealt with during the installation and setting of the harness before the first flight.

**Attention**

- Never sit down in your harness for tests or other activities when it is layed on the ground, this can damage the harness, the rescue container and the whole rescue system.
- The reserve has to be packed and checked every year. This has to be done by an authorized workshop. Pay attention to the references in the owner's manual for your reserve. Each check is to be marked in the check protocol of the reserve.
- Reserve installation: After the first and each following installation has to be made a test (for ex. 2-years-check) to secure that the applied force to pull the reserve lays between 2 and 5 daN. In case of a first combination between harness and reserve there has to be made a test of compability. This test has to be made from an authorized person or workshop!

**Harness adjustment for flight**

Before the first flight, we suggest the pilot simulate his/her flying position hanging the harness on a harness tester, sitting on SOL Harness and trying to find the best position adjustment. This simulation becomes more realistic if the back pocket is filled with objects the pilot would normally carry during flight.

After adjusting the back, the pilot must choose the best body inclination, respecting a central vertical line. We don't advise a steep inclination, so that vision and access to commands are not jeopardized.

The shoulder strap is adjustable, varying according to the pilots' height. For better comfort, the shoulder straps support part of the dorsal weight. The pectoral strap regulates the distance between the two carabiners, which varies depending on the paraglider's size.

The legs' straps adjustment is very accommodating and allows for a wide range of heights. SOL Harness is equipped with leg locks, which works together with the pectoral strap, making the connection of pilot and harness.
**Flight position**
Avoid a laying flying position, as this alters the paraglider’s commands:
- Your command is shortened
- More vulnerable to a twist

**Harness adjustment**
Visualize the details of how to adjust the Calliplox Reversivel for flight:

**Front adjustments**

1. ![Image 1](image1)
2. ![Image 2](image2)
3. ![Image 3](image3)
4. ![Image 4](image4)

**Attention**
- The leg setting cannot be too tight, to avoid jeopardizing good movement.
- Make sure the setting is symmetric.
Lateral adjustment

Shoulder adjustment

Cockpit
The harness allows for the attachment of a special reservoir (container), where the pilot may carry his/her electronic instruments during flight.

Attention
This reservoir cannot be used if the emergency parachute is mounted on the frontal position. In this case, it is possible to acquire a container which will fit the reserve parachute and the instruments.
Towing attack system installation
Your SOL-Harness can be flown by tow, as long as it is attached to the towing flight system (Towing Attack System). In turn, this must be fitted on the same carabiners that link the harness to the paraglider, being activated by an elastic band conveniently located, which when pulled, releases the equipment for flight. Please refer to the instructions concerning flight by tow in your paraglider’s manual.

Adjustment and use of the backpack

1. Take up the backpack and use your knee as support. Put on the shoulder straps.
2. Adjust the safety strap and make sure the backpack fits on the waist and helps to carry the weight.
3. Adjust the shoulder straps till your comfortable.
4. Use the upper straps to adjust the weight distribution.
5. Adjust the chest strap in the way that he doesn't disturb your running,
How to pack

1 – Harness
2 – Reserve
3 – Paraglider
4 - Helmet

Final check
Before you begin flying with your new SOL Harness, make sure to perform the following inspection in detail:

- All pockets are closed?
- The reserve parachute handle is in the correct position?
- Each hook (chest / leg) is connected and closed?
- The carabiner opening is correct?
- Using the harness Calliplox Reversível make sure that all hooks are closed, pay attention to the audible "click". Also pay attention that no dirt or ice is getting in the mechanism. If necessary lubricate with sewing-oil.
Water landing
Usually safety courses are taught over water, or a poorly calculated landing may force you to land in the water. In this event, you must be careful since the protector at the first moment will act as a floating device, therefore forcing your head into the water and you could be in danger of drowning. The foam, already saturated with water will get heavy and may naturally sink. After a water landing you must take the column protector off, seat board, reserve parachute, all lateral protectors and let them all dry under shade in a breezy area.

SOL-Harness with third party paragliders
SOL - Harness doesn't have any usage restriction when combined with other brands of paragliders. Refer to your paraglider's manual.

Maintenance, repair and cleaning

Maintenance
We recommend that your SOL Harness be sent to the manufacturer or an authorized repair facility (licensed once every two years), in order that a professional inspection be performed. Avoid dragging your SOL Harness on the ground, on rocks or on wet surfaces. Prolonged exposure to UV light (sunlight), humidity and heat must be also avoided to prevent early and unnecessary material deterioration.

Zipper
The zipper must open and close softly. If there is any difficulty to move it you must apply paraffin or a spray lubricant to diminish the attrition among the components. You will notice the difference when you move it.

It is possible most of the times you fix by yourself the zipper. In case it does not close any more just pull it until the beginning of the position and with a pliers press both sides of the zipper.
**Pulleys**

It is important you keep pulleys lubricated because in case they do not work may consume the speedy handle or axle, apply paraffin or lubricant spray, read carefully about the lubricant to avoid spots and fabric consume. Do not apply on the sewing lines.

![Image of pulley lubrication](image)

**Cleaning**

Cleaning must be performed only when it is absolutely necessary. We recommend the use of water only with a smooth sponge or cloth. Do not use any chemical product, since it will damage the material permanently.

**Recommendation for a long life**

The harness fabric is made mainly out of Nylon, which like any other synthetic material is sensitive to UV light radiation, causing it to decompose and losing its mechanical resistance. For this reason, the unnecessary exposure to sun light, which carries a high UV radiation level in high altitudes must be avoided. It is highly recommended to leave the harness stored away and well protected when it’s not being used.

Avoid storing the harness for long periods in areas with high humidity or heat, this causes premature aging of the materials. Keep away sand, stones or snow from entering the harness cells because any weight on the trailing edge slows the canopy down, possibly creating a stall, furthermore, sharp corners may cut the fabric.

In case of salt-water contact, the harness must be soaked and washed with fresh water. Salt water might decrease the sewing resistance even if soaked with fresh water.

Never dry the harness directly under the sun. This must be done in a shaded area. After drying send the harness for inspection to the manufacturer or distributor.

After an accident or long time without using the paraglider must be checked. Avoid storing the glider near fire and/or sharp objects. Any contact with acids should be avoided. In case of any doubts ask your distributor.
**Inspection and repairs**
The first inspection check is mandatory completing 24 months or 100 flights, whichever comes first. After the first inspection any harness has to be checked yearly or at each 100 flights, whichever comes first.
In case of excessive use (permanent spirals and other extreme maneuvers) the period of inspection has to be shorter.
It is of utmost importance to follow these guidelines. Without performing the mandatory inspections, the harness loses its certification and the respective SOL warranty becomes null and void.
Always check your equipment after an incident or in case the harness has been stored for a long time.
Repairs must be performed only by the manufacturer, distributor or authorized personnel. Minor repairs could be handled by yourself, although we recommend that repairs should be performed by the manufacturer or authorized personnel. They have the necessary materials and tools to maintain your harness. Replace materials only with the originals. Using any other the harness will lose his certification.

**Nature and environment**
Please fly in accordance to preserve nature and environment.

**CALLIPLOX REVERSÍVEL - Out of use**
If your glider gets out of use remember it cannot be recycled. Please give it to your distributor or your flying-school, they should know how handle it.
Technical Data
Maximum pilot weight allowed: 120 kg LTF.

Weight X Height

Attention
This table is only a reference. Speak with your seller or flight school to know your exactly harness size.

Final words
Safety is the major theme of our sport. In order to fly safely, pilots must train, study, practice and be alert to the dangers around us.

In order to achieve excellent safety levels, we must fly regularly as much as possible, don't go beyond our limitations and avoid exposing ourselves to unnecessary dangers. Learning to fly is a slow process and takes years, so don't pressure yourself. If conditions are not favorable, keep your equipment stored away.

Don't overestimate your skills and be honest with yourself. Every year we see many accidents which in most cases could be prevented with a minor adjustment.

We are a part of the community in which we live: friends, family and even people we don't necessarily know worry about us. Our obligation towards this community is to keep ourselves healthy and that at each landing we will be one landing happier than before. We fly so that we can feel more alive.

We wish you good and safe flights with your Calliplox reversivel.

SOL Paragliding Team
Warranty

**SOL warranty - 1 years/100 hours**
Every harness manufactured has a Warranty of 1 Years or 100 Hours of Flight, whichever comes first.
Our development technology, through the utilization of quality materials and the adoption of new manufacturing processes, allows us to offer you, our client this added bonus.
This warranty is defined as repair or substitution of the defective equipment parts determined by the producer.

**Warranty Terms**
1. This warranty is valid for all harnesses with LTF, EN or AFNOR certification, rated for leisure use only.
2. This warranty does not include harness rated for professional use (school, competitions, aerobatics, etc).
3. This warranty is defined as repair or substitution of the defective harness parts determined by the producer.

**Warranty Pre-requisites**
1. A three-copied filled-out form: One copy to be sent to SOL Paragliders within 30 days after purchase; one copy to the sales person and one copy to the purchaser.
2. All flights must be logged providing information on date, place and length of flight.
3. The equipment must be kept in accordance with the instructions provided in this manual. All the storage, folding, cleaning and care instructions must be carefully taken.
4. Maintenance and inspections can only be performed by the manufacturer or authorized shop and must be properly documented.
5. The owner is responsible for all shipping expenses to and from the manufacturer.
6. In order to make a plea for repair or equipment exchange, or equipment repair, which shall be decided and performed only SOL Paragliders, the owner must send the manufacturer the following:
   a. The harness in question, and copies of all previous inspections and flight registry.
   b. Original copy of the Warranty Registration Form SOL Paragliders.
This Warranty Does Not Cover

1. Any alterations on original fabric colors, lines and risers.
2. Any damage caused by chemical products, sand, friction, cleaning products or salt water.
3. Any damage caused as a result of errors during operation of the harness, incidents or emergency situations.
4. Any damage caused by inadequate operation of the harness.
5. A harness that may have been subjected of any alteration from the original design and without proper permission from SOL Paragliders.
6. Damages caused by inappropriate transport, storage or settings of the harness.
7. Damages caused by the use of not compatible components with the harness.
8. Damages caused by the use of inappropriate packaging for the transport.
9. Harness without original identification label and serial number.
10. Handling inadequately to the instructions given in the owner’s manual.
